

## 653782 Scanner Wand

*Super: iConvert® Portable Document and Photo Scanner*

Hi, this is Michael at Brookstone.  
Have you ever been out somewhere  
and wished you could to scan a copy  
of a receipt, document, or family photo?

Well now you can. Introducing the  
Brookstone Portable Document and  
Photo Scanner.

It's a cordless, portable wand that captures  
full-color scans of documents, business  
cards, letters, photos and more.

It creates sharp, full-color files up to  
600 x 600 dpi, and even includes OCR software  
that converts your scans of written text into  
editable text files on your computer.

And because it's a handheld scanner, you can  
scan packages, signs and books that would  
be difficult or impossible to scan using a  
desktop scanner.

When you see something you'd like to scan—article,  
photo, recipe, whatever—just press the power/scan  
button once and move the scanner slowly across  
the document.

When you're done scanning, press the button  
again, and you now have a digital copy  
stored on a microSD memory card in the scanner.  
This microSD card is sold separately.

Download your scanned images to your computer or other device via any microSD card reader to save and organize your images, and to convert written words into editable text files.

You can also set the time and date for your scans by pressing the POWER/SCAN button and, using the end of a paper clip, press the TIME/SET button on the side of the scanner. Then simply press the C/BW-DPI button to click through and select the year, month, day, hour—even minute—pressing the TIME/SET button one final time to save your settings.

And it's that easy.

Scan anything, anywhere, with the Brookstone Portable Document and Photo Scanner.
